HEATING - MEASURING - CONTROLLING

Oy Meyer vastus Ab

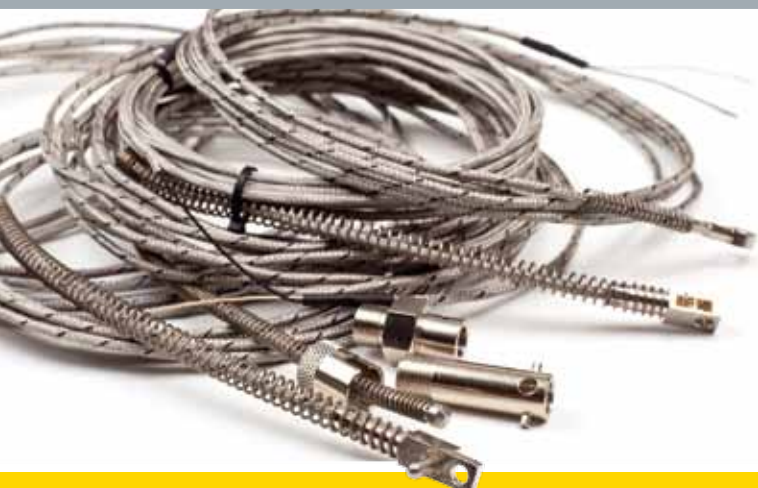

BAND- AND NOZZLEHEATERS are mainly used in the plastics industry in injection moulding machines and extruders. Heaters are also used in other industries to heat pipes and containers.

IMMERSION HEATERS are used in direct contact with liquids; water or oil. Apart from customer specified heaters we have a large stock of standard heaters.

TEMPERATURE SENSORS. We have a big stock of PT-100 sensors and type J and K thermocouples. The sensors are for all industries; plastics industry, food processing industry etc. We can also supply connectors, connection boxes and transmitters.

TUBULAR HEATERS of 8,5mm diameter are manufactured in different steel grades. These are made according to customer specifications and used in all industrial fields.

CARTRIDGE HEATERS are mainly used for heating tools and nozzles in the plastics industry but can be used in different applications where high power is needed in a small space.

TEMPERATURE CONTROLLERS. In stock we have both digital and analog controllers with wide-range functions. We can also supply ready-made controller boxes with input for sensor and output for heater.

IR-HEATERS can be used where contact or convection heating doesn't work and where you want a fast heat-up. IR-heaters are suitable both for heating and drying. On request we also make larger heating panels.

HEATING CABLES can be used for pipes and valves up to 900 °C. Heating hoses are used for transportation of gases and flowing materials.

We have a large range of different **ACCESSORIES** for heaters and sensors. Connectors, heat resistant cables and insulation beads.

SILICONE HEATERS are often used for heating of containers and other smooth surfaces. These are always made according to customer specifications.

DUCT HEATERS are for heating of air in ventilation systems. The heaters are manufactured according to customer needs.

We manufacture **FURNACES** for different heating applications. We also market heat treatment and laboratory furnaces from German manufacturer Nabertherm.

Oy Meyer vastus Ab

Oy Meyer vastus Ab is a Finnish company with long traditions. Today we are completely owned by the Swedish NIBE Industrier Group. Our experience in heater production and temperature control together with good relations to our sister companies guarantee that customers always get the best solution to their heating problem.
